<https://www.linkedin.com/in/daniel-e-sunday>
<https://www.danielsunday.name.ng>

Economics graduate and software developer with experience solving technical problems, building web applications, evaluating information, and debugging applications. Strong in critical thinking, analytical reasoning, attention to detail, written communication, and following structured requirements. Experienced with Python, Go, JavaScript, APIs, databases, and AI-integrated applications, with a focus on building practical and reliable solutions.

EXPERIENCE

Feb 2026 – Present
Software Developer
Learn2Earn NG · Abuja, Nigeria

- Develop software solutions through hands-on training in programming, problem-solving, debugging, and application development.
- Work with Python, Go, JavaScript, databases, APIs, and web development through practical projects and technical exercises.
- Apply structured problem-solving to understand requirements, identify issues, debug code, and implement solutions.
- Collaborate with other developers on technical tasks while using Git and modern development tools.
- Build and evaluate applications with attention to code quality, functionality, and real-world requirements.

EDUCATION

2019 – 2023
Bachelor of Science (B.Sc.) in Economics
Bingham University, Nigeria

PROJECTS

DuePing
<https://www.dueping.site>

- Built a web application for tracking financial commitments, payments, and money owed between individuals, freelancers, and businesses.
- Implemented commitment creation with payer details, amount, due date, and shareable payment links.
- Developed automated email reminders before and after due dates, with recurring reminders until a commitment is settled.
- Designed payment flows that support both registered users and non-users, allowing recipients to access payment links without creating an account.

NGX Analyst — AI-Powered NGX Market Terminal
<https://analyst.danielsunday.name.ng>

- Built a web-based investment analysis platform for tracking Nigerian equities, portfolios, and watchlists.
- Integrated live NGX market data with stock search, market-mover tracking, valuation metrics, dividend information, and portfolio monitoring.
- Implemented technical analysis using indicators including RSI, MACD, and moving averages, alongside fundamental analysis.
- Integrated AI-powered market analysis, investment research, stock verdicts, and personalized portfolio insights.

AI Forex Trading Bot
<https://github.com/dsunday05034-crypto/forex-ai-trader.git>

- Developed a Python-based automated forex trading system for analyzing market data and executing defined trading strategies.
- Implemented market-data processing, trading logic, and automated decision-making based on configured market conditions.
- Tested and refined the system locally to evaluate trading behavior and strategy performance.

Portfolio Website

<https://www.danielsunday.name.ng>

- Designed and developed a responsive portfolio website to showcase software projects, technical skills, and professional experience.
- Built the interface using modern web development technologies and deployed the application for public access.
