

DANIEL EROMOSELE SUNDAY

Software Developer

Abuja, Nigeria • +234 814 992 4722 • dsunday05034@gmail.com

Portfolio: danielsunday.name.ng • GitHub: github.com/dsunday05034-crypto • LinkedIn: linkedin.com/in/daniel-sunday-09a705373

PROFESSIONAL SUMMARY

Economics graduate turned software developer. I build backend tools and applications in Go — CLI tools, HTTP servers, file-processing pipelines — and built my own portfolio site from scratch in vanilla JavaScript. I'm now expanding into Python to build AI-assisted applications, including an in-progress algorithmic trading tool that pulls in live market data through external APIs. My economics background shapes how I approach problems: breaking them into smaller pieces, weighing trade-offs, and reasoning through systems instead of guessing at fixes.

TECHNICAL SKILLS

Languages: Go, JavaScript, HTML, CSS, Python

Backend & Web: HTTP servers, REST API integration, file I/O & stream processing, table-driven testing, responsive front-end (no-framework), WebGL basics

Debugging & Telemetry: Root-Analysis, Real-Device Instrumentation, Runtime Metrics Tracking, System Diagnostics

Currently learning: Supabase (Postgres-backed BaaS)

Tools & Environment: Git, GitHub, Linux (WSL), VS Code, Vercel

Core Concepts: Data structures & algorithms, structural problem solving, quantitative/economic analysis

PROJECTS

Personal Developer Portfolio — *JavaScript, CSS, HTML*

- Designed and built a self-contained portfolio site with no runtime framework dependencies — all assets, fonts, and effects vendored locally rather than fetched from a CDN.
- Ported UI effects (pointer-reactive card glow, WebGL background) from a React component library into plain JavaScript so the site stays framework-free.
- Optimized load performance: compressed images, added explicit dimensions to prevent layout shift, self-hosted web fonts.

AI-Assisted Forex Trading Bot — *Python*

- Building a trading tool that ingests live market data through external financial APIs and applies rule-based/AI-assisted signal logic.
- Applying an economics background — quantitative reasoning and market-analysis fundamentals — directly to the decision logic being developed.

Personal Finance Tracker

- Building a personal finance-tracking application to log expenses, track spending patterns, and visualize monthly trends.
- Focused on clean data modeling and a simple, usable interface for everyday tracking.

ASCII Art Suite & Web Engine — *Go*

- Built a suite of Go CLI tools around a custom ASCII-art rendering engine: colour rendering, multiple banner styles, and alignment modes.
- Built a web-facing version using native Go HTTP handlers and Go's embed/template packages.
- Wrote table-driven unit tests covering rendering accuracy, edge cases, and file-system interaction.

Go Stream-Based Text Processor — *Go*

- Built a stream-processing CLI for typography correction, macro/token parsing, and text transformations, using buffered readers/writers for efficient line-by-line processing.
- Added case transformations and binary/hexadecimal conversion utilities.

WORK EXPERIENCE

Software Developer Fellow

Feb 2026 – Present

Learn2Earn — Abuja, Nigeria

- Selected into a project-driven software engineering fellowship founded by Iyinoluwa Aboyeji (Andela, Flutterwave).
- Collaborate with peers building applications in Go, JavaScript, and Python, following modern testing and deployment workflows; participate in regular code reviews.

Real Estate Agent

Jul 2023 – Present

Dancel Jovic Integrated International Ltd — Abuja, Nigeria

- Advise clients on property acquisitions, matching requirements to budgets; negotiate lease and purchase terms and maintain accurate portfolio records.

NYSC Corps Member

2023 – 2024

Government Secondary School, Gora — Nasarawa, Nigeria

- Completed the National Youth Service Corps program; delivered classroom instruction and coordinated student records and scheduling.

EDUCATION

B.Sc. Economics (Second Class Honours, Upper Division)

Graduated Oct 2023

Bingham University — Nasarawa, Nigeria

- Thesis: The Impact of Financial Literacy on the Performance of SMEs in Keffi, Nigeria — applied econometric regression models to test the link between financial awareness and small-business profitability.

CERTIFICATIONS & TRAINING

- Basic Financial Education Training — NNPC/NYSC Camp (2023)
- International Relations & Global Leadership — Virtual Mobility Class, Sumy State University & Washington State University (2022)

LANGUAGES

- English: Fluent
